DETAILED ACTION

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-11, drawn to a dynamic crash pulse wave assessor, classified in class 702, subclass 66.
 - II. Claims 12-24, drawn to a CAE waveform assessor, classified in class 702, subclass 71.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as a computer aided engineering design algorithm for use in a load pressure simulation in a mechanical system. See MPEP § 806.05(d).
3. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
4. During a telephone conversation with John Artz on February 4, 2004 a provisional election was made without traverse to prosecute the invention of a dynamic crash pulse waveform assessor, claims 1-11. Affirmation of this election must be made by applicant in replying to this Office action. Claims 12-24 withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Art Unit: 2857

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

EXAMINER'S AMENDMENT

6. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with John Artz on February 4, 2004.

7. The application has been amended as follows:

Claims 12-24 are cancelled.

Allowable Subject Matter

8. **Claims 1-11** are allowed.

9. The following is an examiner's statement of reasons for allowance: Blackburn teaches. Gioutsos et al. teach a method of generating model crash waveforms for testing vehicle crash detection system. The prior art of record does not teach a dynamic crash pulse wave assessor comprising a time domain assessor including a first crash pulse waveform integrator, said time domain assessor comparing said crash pulse waveform to said reference waveform to produce a time domain index; a

Art Unit: 2857

frequency domain assessor including a crash pulse waveform fast Fourier transform, said frequency domain assessor comparing said crash pulse waveform to said reference waveform to produce a frequency domain index; and an overall assessor merging said time domain index and said frequency domain index to produce an overall index.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Day et al. teach a method for simulating collisions. Gioutsos et al. teach a method of generating model crash waveforms for testing vehicle crash detection system. Mazur et al. teach a method and apparatus for sensing a vehicle crash in real time using a frequency domain summation algorithm. Blackburn et al. teach a method for determining frequency components in a vehicle crash. Cuddihy et al. teach a vehicle crash data generator.
